

## White Paper

### Introduction

Diet Dr. Kelp token is a meme token project created in December 2021 from a group of artists and technicians that believe in the power of Memes. We imagine a world where individuals can pay with character in a decentralized financial system.

### What is Diet Dr Kelp?

Diet Dr. Kelp is a BEP20 Token on Binance Smart Chain with built in Tokenomics to increase value by burning tokens with every transaction.

### Why Binance?

Binance is the most popular and cost efficient option at this moment in crypto and this is why we went with the Binance smart chain. We want to provide personality options for cryptocurrency but we don't want to throw money away. Who wants to pay outrageous gas fees?

### Diet Dr Kelp Tokenomics

Reward the holders and build stability!

- 1% of every transaction get burned
- 3% to fund marketing and project

At the heart we are a group of artists, healers, farmers and technicians. We have big plans for marketing and building up the popularity and community of Diet Dr. Kelp Token. We recognize the importance of marketing in the meme token space and it would be tragic to not have marketing built into the Tokenomics of \$KELP. Marketing will also be returned to the holders through rewards such as NFT's or giveaways to Active holders. We also understand the importance of value and stability which is why 1 % of every transaction gets burned.

Marketing will also go to future projects and goals! We have projects that range from NFT's to the worlds most inexpensive water purifier!

We are also whitelisted on TribalDex by Hive-Engine for some added trading action along with gaming! With an even better ecosystem built with ZERO gas fees.

The water purifier will be a 3-D printed four chambered stone / charcoal purification system. 3-D plastic will start from recycled plastic bottles and material and then continue with fresh hemp plastic.

All info on purifiers will be published once the patent designs are complete.
